

Did you know ...

- that our mining specialists who rehabilitate old sites enter underground cavities that no one has entered for more than three hundred years?
- that Schachtbau has already safeguarded 28 salt mining shafts with complex sealing systems for long-term security?
- that our miners are driving thousands of meters of drifts at a depth of 800 m in the world's richest chromium ore deposit?

Innovative · Versatile · Reliable

Schachtbau Nordhausen

Tradition meets the future

Our mining services at a glance

Mining through the ages

While mining in its early days mainly meant excavation and the development of deposits, mining activities today primarily include shaft maintenance, long-term safeguarding and repository construction. Thanks to over 125 years of mining experience, we will continue to be able to offer our customers the full range of mining services in the future.

Life cycle of a deposit – from excavation to closure and safeguarding

We offer you services for all phases of a mine's life cycle:

- Engineering
- Development
- Repair, maintenance and services
- Safeguarding and old mining sites
- Equipment and facilities

Enthusiastic about diverse solutions in mining

Our individual solutions always follow the active principle of offering customers optimal conditions yet also equally taking the on-site conditions into account.

We will find the optimum solution for you.
